About

The Pacific Aid Map consists of data on more than 37,000 projects and activities across all Pacific Island nations from 97 development partners, with complete data from 2008 to 2022. This raw data is freely available on the Pacific Aid Map interactive platform, allowing users to drill down and manipu- late the data in a variety of ways.

Key concepts

Official development finance (ODF) refers to pub- lic funds provided by governments and international organisations to promote economic and social devel- opment in low- and middle-income countries. It is the combination of official development assistance (ODA) and other official flows (OOF).

Official development assistance (ODA) is defined as financial flows that are provided by official agencies and are administered with the promotion of the economic development and welfare of developing countries as the main objective and are concessional in character.

Other official flows (OOF) consist of financial flows that do not meet the conditions for ODA either because they are not primarily aimed at development or because they do not meet Organisation for Economic Co-operation and Development (OECD) concessionality standards.

Donors

A donor is an entity, such as a government or organ- isation, that provides foreign assistance to support economic and social development in other countries. The Pacific Aid Map focuses on 97 official agencies or partners, both bilateral and multilateral.

Recipients

The recipient countries in alphabetical order are: Cook Islands, Fiji, Kiribati, Marshall Islands, Federated States of Micronesia, Nauru, Niue, Palau, Papua New Guinea, Samoa, Solomon Islands, Tonga, Tuvalu, and Vanuatu. Additionally, there is an Oceania regional recipient category that captures all regional and multi- country projects.

Committed vs. spent

There is an important distinction between what de- velopment partners have committed in the region and what they have actually spent. Large commitments, typically in infrastructure, can often take a long time to disburse, meaning commitments can often overstate a donor's overall footprint. Spent funds are a better indication of annual flows into the region.

Sectors

Sectors have been drawn from the OECD sector categories and condensed for formatting purposes. The sectors are: Agriculture, Forestry & Fishing, Communications, Education, Energy, Government & Civil Society, Health, Humanitarian Aid, Industry, Mining & Construction, Multisector/Cross-cutting, Transport & Storage, Water & Sanitation, and other/ unspecified.

Sources

There are two major existing databases for track- ing aid and development finance: the OECD's Development Assistance Committee (OECD DAC) and the International Aid Transparency Initiative (IATI). Unfortunately, neither dataset has compre- hensive reporting on non-traditional partners such as India, China, and Taiwan, nor do they cover each Pacific Island country. Steps have been taken by the Pacific Aid Map team to both fill the gaps in existing reporting mechanisms and validate what has been re- ported through official channels. The team collected, cleaned, and analysed data from open sources such as government budget documents, press releases, news media and social media, and websites of resident em- bassies. These sources are available via hyperlinks in the Pacific Aid Map database.

This approach, while detailed, will never be entirely comprehensive and some projects will likely be miss- ing, especially from non-traditional partners. However, we are confident that this approach has produced the most complete picture of non-traditional development partner activities to date.

Climate, disability, and gender equality development finance

The OECD policy marker system provides an in- dication of the degree of investment a policy goal receives within an ODF project. A modified version of the OECD's marker system for climate, disability, and gender equality has been applied to all projects in the Pacific Aid Map dataset, sorting projects into three categories: "principal", where climate change mitigation or adaptation/inclusiveness of persons with disabilities/gender equality is

explicitly stated as fundamental to the project; "significant", where cli- mate change mitigation or adaptation/inclusiveness of persons with disabilities/gender equality is explicitly stated but not fundamental; and "not climate related", where climate change mitigation or adaptation/inclu- siveness of persons with disabilities/gender equality is not targeted in any way. The Pacific Aid Map team has taken at face value the climate, disability, or gen- der equality relevance marking given to projects by those development partners who self-report using the OECD system. For those partners who do not report, each project has been allocated a rating based on rel- evant criteria such as project and partner information, Sustainable Development Goal indicators, and OECD sub-sectors.

Data caveats

The research covers the period from 2008 to 2022. Data for non-traditional development partners is likely to be incomplete. Additionally, the OECD relies on partner self-reporting of OOF, and partners report into it to varying degrees. It likely understates the actual volume of OOF being transferred to the region.

Review process

The clean dataset was provided to both recipient and main partner governments and organisations for con- firmation. The full methodology and a representative subset of the data was sent to an independent, exter- nal organisation for robust peer review and to validate, test, and recreate the results.

Currency

All currency is quoted in constant 2022 US dollars.
